PROJECTREPORT

ON

"FRESH FOOD MART"

SUBMITTED AS A PARTIAL REQUIREMENT FOR

BACHELOR OF COMPUTER APPLICATION

(SEMESTER V)

GUIDED BY:-

PROF. MINAL DESAI

SUBMITED BY:-

MISTRY KEYUL[3328]

PATEL GAURAV[3362]

PATEL PRIT[3369]

YEAR 2025-26

The success and outcome of this project required a lot of guidance and assistance from many people, and we are extremely fortunate to have gotten this all along with the completion of our project work. Whatever we have done is only due to such guidance and assistance.

We would not forget to thank Principal Dr. Ashish Desai, BCA coordinators Dr. Shalini Mali and Ms. Heta Desai and our project guide **------MINAL DESAI------** and all other assistant professors, who took a keen interest in our project work and guided us all along till the completion of our project work by providing all the necessary information for developing a good system.

We are extremely grateful to them for providing such nice support and guidance, though he/she had a busy schedule managing the college dealings.

We are thankful and fortunate enough to have gotten support and guidance from all the teaching staff in the Bachelor of Computer Application Department, which helped us successfully complete our project work. Also, we would like to extend our sincere regards to all the non-teaching staff of the Bachelor of Computer Application Department for their timely support.

1.MISTRY KEYUL(3328)

ABSTRACTS:

********Write a detailed abstract about your project********

This project introduces a user-friendly story generation website that creates personalized stories with minimal input. Key features include automated image generation, multilingual storytelling, audio narration, and an intuitive interface for easy story creation, modification, and sharing. The platform enhances engagement through community story sharing and ensures optimal performance with mobile responsiveness. Using modern web technologies, it provides a seamless and interactive storytelling experience, making story creation simple and enjoyable.

1.INTRODUCTION:-

Fresh K Mart is a modern food ordering platform designed to make daily shopping easier, faster, and more convenient. The project focuses on providing customers with fresh groceries and food items directly at their doorstep. With an easy-to-use ordering process, customers can browse, select, and place orders without any hassle. One of the unique features of Fresh K Mart is the free delivery service for local locations, ensuring affordability and accessibility for the community. This project aims to bridge the gap between local sellers and customers by offering quality products, reliable service, and customer satisfaction.

1.1 PROJECT PROFILE:-

The **FRESH FOOD MART Website** is a web-based application developed using **PHP, MySQL, HTML, CSS, JavaScript, and Bootstrap**. The project is designed to provide a digital platform where client can order food from online based application & websites and place their order according their needs and we delivered the order according to the clients.

Project Title: Fresh Food Mart
Language: PHP & MYSQL
Database: SQLite
Users: General users who want to order foods & related services.

1.2 PROJECT OBJECTIVES:-

- Easy and user-friendly ordering process.

- Free delivery service for local areas to support community needs

- High-quality and fresh food products at affordable prices.

- Building a bridge between local vendors and customers.

The system consists of two main modules:

1. User module.
2. Admin module.

2 ENVIRONMENT DISCRIPTION:-

2.1 Hardware and Software Requirements

Hardware Configuration:

Processor：	INTEL i5 or HIGHER
Ram :	Minimum 4 GB
Hard Disk :	Minimum 100 GB
Monitor :	15” Color Monitor

Software Requirements:

Operating System :	Windows/Linux
Server :	XAMPP
Backend:	MySQL
Frontend:	HTML, CSS, JavaScript, Bootstrap
Programming Language:	PHP
Browser:	Firefox

2.2 TECHNOLOGY USED:-

The **Fresh Food Mart Website** is developed using a combination of **frontend, backend, database, and server technologies**. Each technology plays a crucial role in ensuring smooth functionality, user interactivity, and secure data handling.

1. Frontend Technologies:

- **HTML** – For structuring web pages and content.
- **CSS** – For styling and layout design.
- **JavaScript** – For client-side scripting and interactive features.
- **Bootstrap** – For responsive and mobile-friendly design.

2. Backend Technology:

- **PHP (Hypertext Preprocessor)** – Server-side scripting language used to handle business logic, process user requests, and communicate with the database.

3. Database Technology:

- **MySQL** – Relational database management system used to store user information, lost items, found items, and admin records.

4. Server Environment:

- **WAMP**– Provides the local server environment required to run PHP and MySQL applications.

5. Development Tools:

- **WAMP** – Integrated package containing Apache, PHP, and MySQL for development and testing.
- **VS Code / Sublime Text** – Code editor for writing and debugging code.

phpMyAdmin – Web-based tool for managing MySQL databases

3 SYSTEM REQUIRED SPECIFICATION:-

3.1 DATA DICTIONARY

1) Admin

FIELD	DATATYPE
adm_id	int(222)
username	varchar(222)
password	varchar(222)
email	varchar(222)
code	varchar(222)
date	Timestamp

2)Dishes

FIELD	DATATYPE
d_id	int(222)
rs_id	int(222)
title	varchar(222)
slogan	varchar(222)
price	decimal(10,2)
img	varchar(222)

3)Remark

FIELD	**DATATYPE**
id	int(11)
frm_id	int(11)
status	varchar(255)
remark	mediumtext
remarkdate	Timestamp

4) Restaurant

FIELD	**DATATYPE**
rs_id	int(222)
c_id	int(222)
title	varchar(222)
email	varchar(222)
phone	varchar(222)
url	varchar(222)
o_hr	varchar(222)
c_hr	varchar(222)
o_days	varchar(222)
address	text
image	text
date	Timestamp

5) Res_category

FIELD	**DATATYPE**
c_id	int(222)
c_name	varchar(222)
date	timestamp

6) Users

FIELD	**DATATYPE**
u_id	int(222)
username	varchar(222)
f_name	varchar(222)
l_name	varchar(222)
email	varchar(222)
phone	varchar(222)
password	varchar(222)
address	text
status	int
date	timestamp

7) Users_orders

FIELD	**DATATYPE**
O_id	int(222)
U_id	int(222)
Title	varchar(222)
Quantity	int(222)
Price	decimal(10,2)
Status	varchar(222)
date	timestamp

DATABASE:-

- **Onlinefoodsystem.**

admin

remark
restaurant
res_category
users
users_orders

3.2 FEASIBILITY ANALYSIS:-

Feasibility analysis is conducted to evaluate whether the proposed **Website** can be developed and implemented successfully within given constraints of cost, technology, and user acceptance. The following aspects were considered:

3.2.1 Economic Feasibility

The project is **economically feasible** because it uses **open-source technologies** such as PHP, MySQL, Apache, and Bootstrap, which are free of cost. Development requires only basic hardware (personal computer/laptop) and a local server setup (XAMPP/WAMP).

- No licensing fees are required.
- Deployment on local intranet or affordable hosting platforms is possible.
- Maintenance costs are minimal.

3.2.2 Technical Feasibility

The system is **technically feasible** as it uses widely available and well-documented technologies.

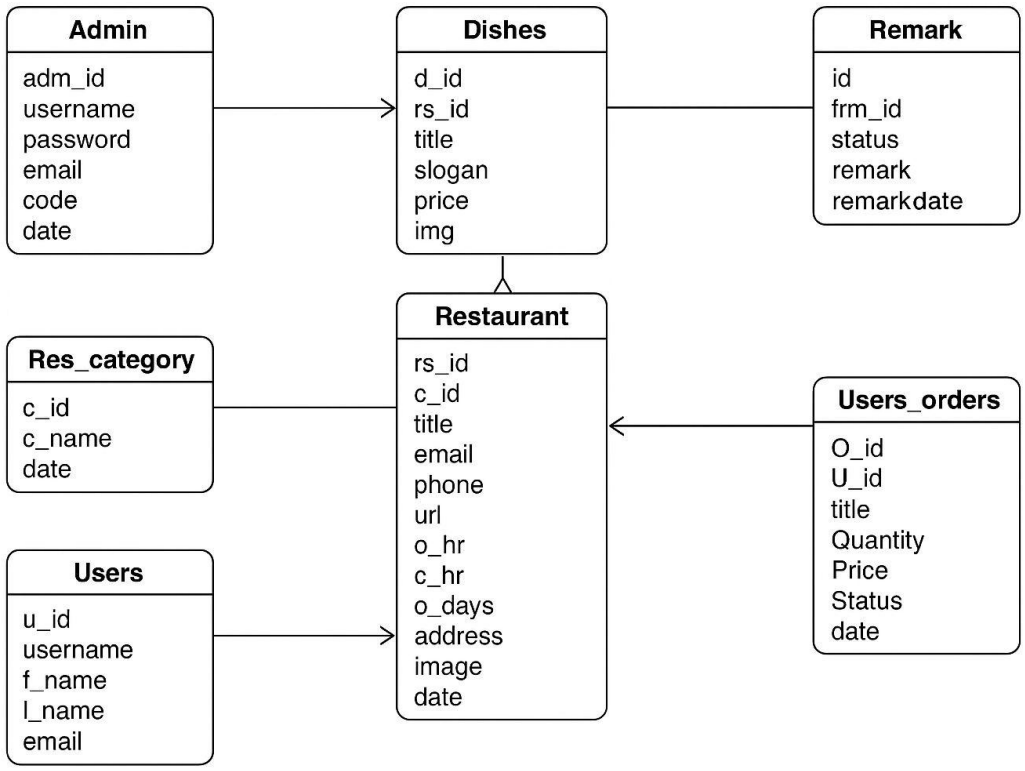

- PHP and MySQL are proven and reliable technologies.
- Development tools like XAMPP, phpMyAdmin, and VS Code are easy to install and use.
- The system does not require advanced hardware and runs efficiently on commonly available systems.
- User interface is designed with Bootstrap for responsiveness, making it accessible on both desktop and mobile devices.

3.2.3 Behavioural Feasibility

The system is **behaviorally feasible** because it is designed to be user-friendly and intuitive.

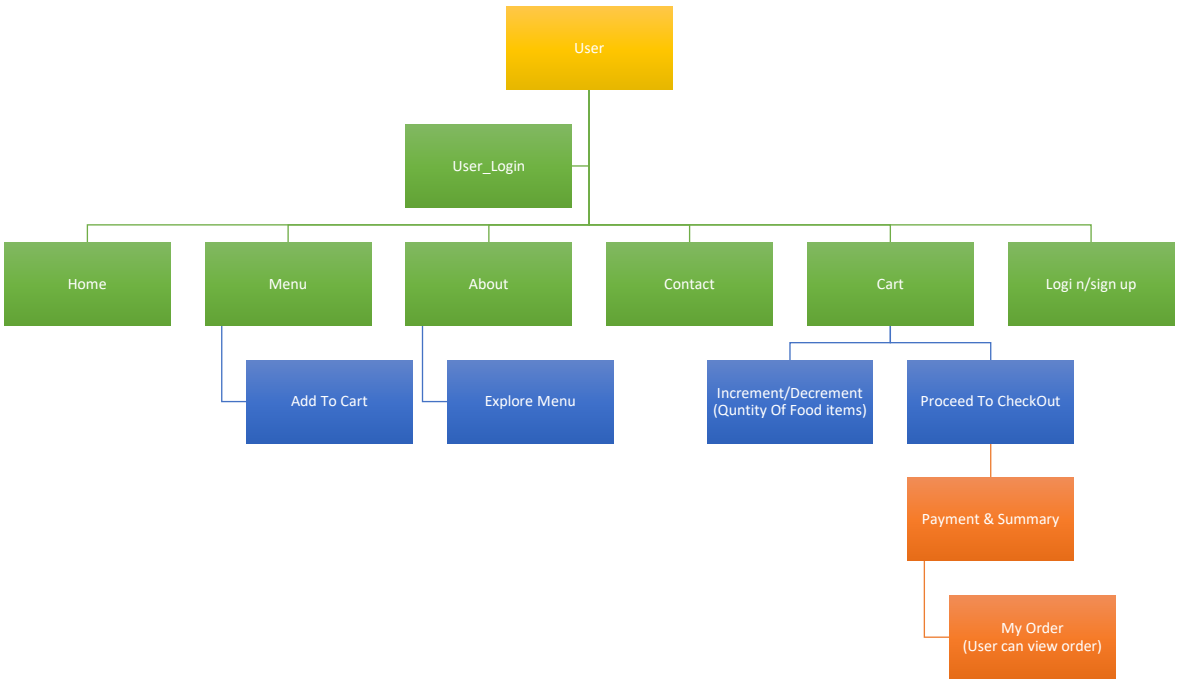

- Users with basic computer knowledge can easily register, log in, and post lost/found items.
- Search functionality makes it simple for users to find relevant items quickly.
- Admin module ensures security and prevents misuse of the platform.
- The website reduces dependency on physical notice boards or manual reporting, which encourages wider acceptance.

3.4 DATA FLOW DIAGRAM:-

USER SIDE DATA FLOW DIAGRAM:-

ADMIN SIDE DATA FLOW DIAGRAM:-

4 SOFTWARE PROJECT PLANNING:-

Software project planning defines the scope, objectives, and expected benefits of the proposed system. It provides a roadmap to ensure that the project is completed within time, budget, and resource constraints.

4.1 SCOPE:-

Scope:-

1. Online Food Ordering System – Customers can browse food items, add them to the cart, and place online orders conveniently.

2. User Registration & Login – Secure authentication for customers and admins to access respective functionalities**.**

3. Product Management – Admin can add, update, and delete food items with details like name, category, price, and image.

4. Category-wise Browsing – Customers can explore food items under categories such as fruits, vegetables, dairy, snacks, etc.

5. Shopping Cart & Checkout – Customers can add multiple items to the cart, view totals, and proceed to checkout.

6. Order Management – Customers can track their orders; admins can view, process, and update order statuses.

7. Database Management (MySQL) – Stores customer details, product data, and order history securely.

8. Payment System (Optional) – Integration of online payment gateway or cash-on-delivery option.

9. Search & Filter – Customers can search food items quickly by name, price, or category.

10. Responsive Design – Works smoothly on desktop, tablet, and mobile devices.

4.2 OBJECTIVES:-

1. To provide a digital food marketplace where customers can order fresh food items online.

2. To simplify the food ordering process by allowing users to browse, select, and purchase items with ease.

3. To enable secure user management with customer registration, login, and profile handling.

4. To offer efficient product management for the admin to add, update, and remove food items.

5. To maintain accurate order records in a structured MySQL database for tracking and future reference.

6. To reduce manual effort in managing food orders, inventory, and billing.

7. To provide real-time order tracking so customers know the status of their purchase.

8. To improve customer convenience through features like cart, checkout, and multiple payment options.

4.3 EXPECTED ADVANTAGES:-

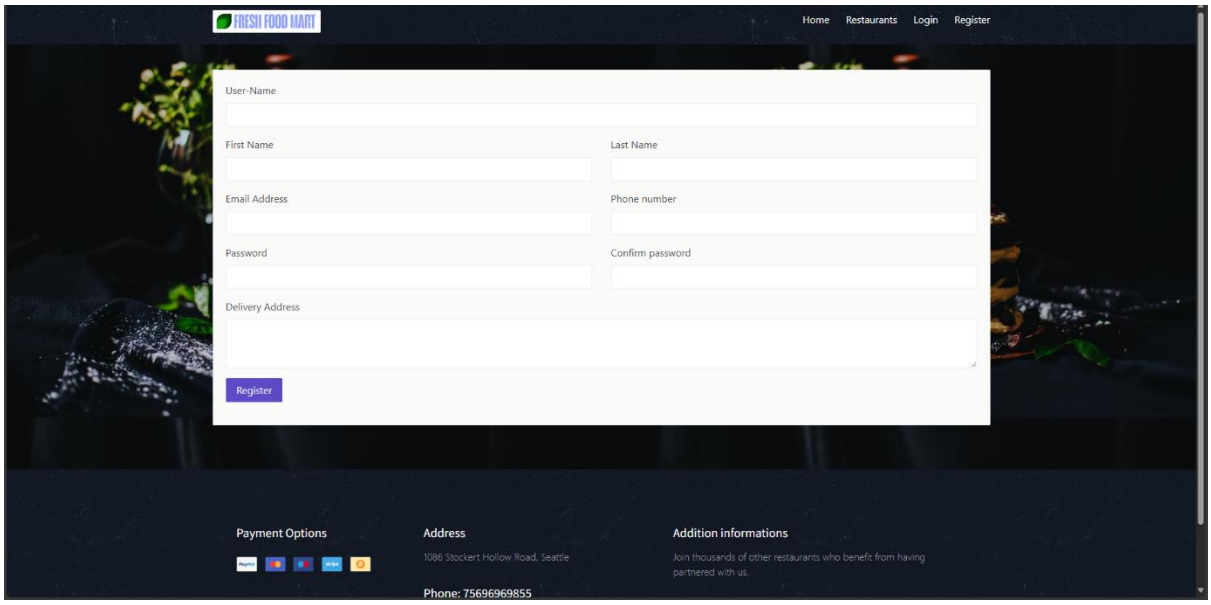

The proposed system offers several benefits over traditional methods:

EXPECTED ADVANTAGES:	DESCRIPTIONS:
Easy accessibility	**Customers can order fresh food anytime, anywhere without visiting the store.**
Time-saving	**Reduces the time spent on shopping physically; quick online checkout.**
Efficient order management	**Admin can track, update, and manage orders systematically.**
Wide customer rich	**Expands the business by reaching more customers through the online platform.**
Secure Transaction	**Customer data and payments are handled safely using PHP & MySQL security features.**
Inventory Control	**Inventory Control Admin can easily add, update, or delete food items from the system.**
Customer Convenience	**Features like search, filter, cart, and order history make the process user-friendly.**
Cost-Effective	**Reduces operational costs compared to a traditional physical setup.**
Better record keeping	**All orders, payments, and customer data are stored systematically in the database.**

Yorkshire Lamb Patties
Lamb patties which melt in your mouth, and are quick and easy to make. Served hot with a crisp salad.
$12.00
Order Now
Lobster Thermidor
Lobster Thermidor is a French dish of lobster meat cooked in a rich wine sauce, stuffed back into a lobster shell, and browned.
$34.00
Order Now
Chicken Madeira
Chicken Madeira, like Chicken Marsala, is made with chicken, mushrooms, and a special fortified wine. But, the wines are different;
$56.00
Order Now
Stuffed Jacket Potatoes
Deep fry whole potatoes in oil for 8-10 minutes or coat each potato with little oil. Mix the onions, garlic, tomatoes and mushrooms. Add yoghurt, ginger, garlic, chillies, coriander
$6.00
Order Now
Pink Spaghetti Gamberoni
Spaghetti with prawns in a fresh tomato sauce. This dish originates from Southern Italy and with the combination of prawns, garlic, chilli and pasta. Garnish each with remaining tablespoon parsley.
$10.00
Order Now
Cheesy Mashed Potato
Deliciously Cheesy Mashed Potato. The ultimate mash for your Thanksgiving table or the perfect accompaniment to vegan sausage casserole. Everyone will love it's fluffy, cheesy.
$12.00

6 SOFTWARE TESTING:

Software Testing is one of the most important phases in software development. It is the process of evaluating a system or its components with the intent to find whether it satisfies the specified requirements and produces the desired results. Testing ensures that the software is reliable, secure, efficient, and user-friendly before deployment.

Testing was conducted at different levels to verify that the system works as expected. It checks your website which works properly or not likes all orders are shown on admin panel which orders are ordered by consumer.

6.1 INTRODUCTION:-

The testing phase is critical to identify and eliminate errors in the system. FRESH FOOD MART is designed to order foods on online medium. You can place your order at your home and at anywhere.

The main goals of testing FRESH FOOD MART were:

- To verify that all modules function as per requirements.
- To ensure the system is error-free and user-friendly.
- To check data flow between frontend, backend, and database.
- To validate security features such as login authentication.

6.2 OBJECTIVES:-

The objectives of testing in FRESH FOOD MART are as follows:

1. **Functionality Verification**
    - Ensure all modules (Admin, Dishes, Remarks, Orders, etc.) work as intended.
    - Validate user registration, login, and authentication processes.
    - Confirm that food items can be added, updated, viewed, and ordered properly.
2. **Data Integrity & Database Validation**
    - Verify that data is correctly stored in and retrieved from MySQL tables (admin, dishes, remarks, etc.).
    - Ensure no data duplication, loss, or inconsistency occurs.
3. **Usability Testing**
    - Ensure the website is user-friendly and easy to navigate.
    - Check that users can search/select dishes and place orders with minimal steps.
4. **Performance & Load Testing**
    - Evaluate how the website performs under multiple users placing orders at the same time.
    - Test response times for menu display, order confirmation, and admin operations.
5. **Compatibility Testing**
    - Verify that the website runs smoothly across different browsers (Chrome, Edge, Firefox) and devices (desktop, mobile, tablet).
6. **Security Testing**
    - Ensure that passwords and sensitive data are protected.
    - Validate protection against SQL injection, XSS, and unauthorized admin access.
7. **Error Handling & Validation**
    - Confirm that proper error messages are displayed for invalid inputs (like blank forms, wrong credentials, unavailable dishes).

- Ensure required field validation is enforced both on frontend (HTML/JS) and backend (PHP).

8. **Order & Payment Workflow Testing** *(if included)*
    - Verify that the order placement, confirmation, and status tracking (remark/status table) work correctly.
    - Check if payment integration (if any) processes transactions securely.
9. **Regression Testing**
    - Ensure that when new features/updates are added, existing functionality remains unaffected.
10. **Deployment & Maintainability**

- Confirm that the system can be easily deployed on XAMPP/WAMP or a live server.
- Ensure admin panel and database backups can be restored without issues.

6.3 LEVELS OF TESTINGS:-

Unit Testing

- Tests individual modules/functions in isolation.
- Example:
    - Test login function with correct/incorrect credentials.
    - Test “Add Dish” function in admin panel.
    - Test validation function for required fields.

Integration Testing

- Ensures different modules work together correctly.
- Example:
    - Test if placing an order updates the “dishes” and “remarks” tables.
    - Verify that the user registration module integrates with the login module.

System Testing

- Validates the complete website as a whole.
- Example:
    - A customer signs up → browses dishes → adds items to cart → places order → admin updates order status → customer views remarks.
- Checks performance, usability, and security of the full application.

Acceptance Testing

- Ensures the website meets user/business requirements.
- Example:
    - Confirm that customers can place orders easily.
    - Verify that the admin can manage dishes and track orders.
- Done from the perspective of end-users and stakeholders.

6.4 TEST CASES:-

Test Case I'd	Test Scenario	Test Steps	Expected Result	Actual Result	Status
TC01	User Registration with valid detais	Enter complet Detail	Registration Complate	As expected	Pass
TC02	User Login with valid details	Enter correct email and password, click login	User dashboard should be displayed	As expected	Pass
TC03	User Login with invalid details	Enter wrong password	System should display "Invalid Login" message	As expected	Pass
TC04	Registration with duplicate email	Enter existing email in registration form	System should reject and display error message	As expected	Pass
TC05	Make Order	Add to Cart & check Out	Display Msg "Oreder Placed."	As expected	Pass
TC06	Order Show in Admin panel	Go in Order In Admin Penal	Show All oreder of All users	As expected	Pass
TC07	Can update status of order	Go And Edit Order Status	Status should be Updated.	As expected	Pass

7. References / Bibliography

The development of this project was guided by various online resources, official documentation, and community knowledge bases. The following references were used during the research, design, development, and testing phases:
